Project Proposal: Car Management System

1. Project Overview

The Car Management System is a web-based application developed using HTML, CSS, JavaScript, PHP, and MySQL. It allows customers to browse cars, view details, place orders, and track their order history. Administrators can manage cars, customers, orders, and system records through a centralized dashboard.

2. Project Objectives

- Provide a simple and user-friendly car browsing and ordering platform.
- Allow customers to place order and view order history.
- Enable administrators to control car inventory, and incoming orders.
- Maintain order and simulated payment records in a database.

3. Key Features and Requirements

1. Home Page: Navigation bar with Home, Cars, Login, and Contact, along with an About section and featured cars.
2. Login: A single login page for both administrators and customers, with role-based redirection to their respective dashboards.
3. Registration: A dedicated page for new customer account creation.
4. Admin Dashboard: One scrollable page containing car management (add/delete), incoming orders, and historical records.
5. Customer Order Management: Administrators can view incoming orders, customer details, and order status within the admin dashboard.
6. Customer Dashboard: One scrollable page displaying available cars, car details, account information, and order history.
7. Customer Order Section: Customers can select cars, place orders, and view their order details and status within the customer dashboard.
8. Customer Payment Section: A simulated payment interface for placing and tracking payments, without processing real financial transactions.

4. Technologies Used

- Frontend: HTML, CSS, JavaScript
- Backend: PHP

- Database: MySQL

5. Expected Outcome

The project will provide a functional car management website with a shared login system, customer registration, and centralized scrollable dashboards. It will simplify car browsing, ordering, simulated payments, and administrative tasks while storing relevant information in a database.
